CAMBODIA: Kingdom's rubber exports bring \$239M, stand next to garments

Cambodia's export sector saw a significant upswing in rubber and rubber article shipments in January 2026, as export revenues surged to \$239 million, up 66 % from \$144 million in January 2025, according to trade data from the General Department of Customs and Excise (GDCE), highlighting the Kingdom's growing position in the global rubber market. In value terms, Cambodia's exports of rubber and rubber-based products stand only next to the garments' exports in January 2026. This jump reflects not only higher export volumes but also supportive global price trends and expanding value-added processing in

the domestic industry. Analysts say that rising international demand — particularly from type manufacturers and industrial buyers in Asia — has helped push export earnings higher, even as domestic production continues to grow. Rubber has emerged as one of Cambodia's key agricultural export earners, contributing alongside garments, footwear, travel goods and agricultural produce to the Kingdom's expanding export basket. In 2025, Cambodia posted robust growth in its rubber industry, with annual rubber and rubber-based product exports climbing significantly compared to 2024 levels. Rubber exports recorded a strong performance in 2025, increasing by 37 % compared to 2024 to reach \$2.06 billion, underlining a broader expansion beyond raw latex into semi-finished and finished products. Export growth has been underpinned by supportive government policies, improved farming practices, and increased investment in processing facilities and downstream industries such as tyre manufacturing. The presence of multiple type factories in provinces like Svay Rieng, Preah Sihanouk and Kratie has boosted domestic demand for locally grown rubber and expanded the industry's value chain, absorbing larger shares of production and supporting higher export earnings. Global natural rubber prices have shown fluctuations in recent months, influenced by supply-demand dynamics, production costs, and weather conditions in major producing countries. Benchmark rubber prices have rebounded modestly in early 2026, rising to around \$1.92/kg — marking a mild uptick over the past month and reflecting renewed buying interest. The broader natural rubber market has experienced periodic volatility, with prices dipping at times in 2025 due to seasonal supply variations and subdued downstream demand. Still, forecasts point to a generally firm outlook in 2026 as global consumption — particularly from the automotive sector, medical rubber goods, and infrastructure construction — continues to grow and supply constraints persist in some producing regions. Importantly, Cambodian export prices have themselves reflected these global trends. Official figures from 2025 show the average export price of rubber latex hovered near US \$1,756 per ton, modestly higher than the previous year, which supported export revenue growth despite mixed volume trends. Despite promising export figures, the Cambodian rubber sector faces challenges that mirror broader global industry patterns. These include weather-related production risks, cost pressures from labor and inputs, and competition from other major Southeast Asian producers. Moreover, while exports have climbed, rising domestic demand — especially from local manufacturing — has in some periods absorbed larger portions of output, slightly moderating export volume growth. Industry stakeholders also highlight opportunities in value-added products and diversification into rubber wood and processed goods, which can capture higher margins and drive further export growth. Ongoing discussions with international partners to develop rubber wood industries and end-of-life wood processing reflect this strategic push. The rubber sector remains one of Cambodia's important agricultural industries, supporting thousands of smallholder farmers and plantation workers, especially in provinces such as Kampong Cham, Kratie, Mondulkiri and Ratanakiri. With natural rubber prices expected to remain resilient and demand for rubber-intensive products like tyres and industrial components holding steady, Cambodia's rubber export sector is well-positioned for continued expansion in 2026.

CAMBODIA: Cambodia's electrical goods exports surge in 2025

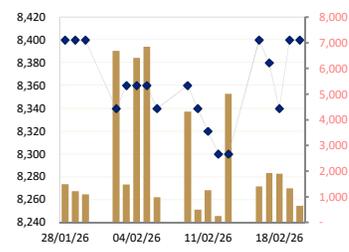

Cambodia's exports of electrical equipment and electronic components saw significant growth in 2025 as the country is moving beyond garment manufacturing to electronics and automotive parts. Figures from the Ministry of Commerce showed that the Kingdom exported electronic equipment and parts valued at \$924 million in 2025, up 35.7 % from \$681 million in 2024. Exports of electric wires and components rose by 51.6 % to \$575 million and that of automotive spare parts by 11.34 % to \$294 million last year, the report stated. The Cambodia Chamber of Commerce expressed happiness over this trend and termed the surge in the exports of electrical equipment and electronic components as a crucial turning point for the national economy, indicating the rising demand for Cambodian products in foreign markets. "The growth in electronics and auto parts shows that our investment climate is maturing. It shows success in the efforts of Cambodia to diversify its products beyond garments," CCC Vice-President Lim Heng told Khmer Times. He linked the growth in the exports of these items to advantageous trade agreements such as bilateral free trade agreements with China and South Korea, besides the mega regional free trade agreement RCEP. Though the garments, footwear and travel goods sector remains the largest employer in Cambodia, the significant growth in the exports of electrical equipment and electronic components has opened another positive front in the economic development of the country. This shift is largely attributed to the Cambodia Automotive and Electronics Sectors Development Roadmap, a strategic government initiative designed to transform the country into a regional hub for component manufacturing. Over the years, the share in the exports of garments, footwear and travel bags decreased from 91 % of the country's total exports in 2000 to 37.89 % in 2025, while in the case of non-garment manufacturing goods such as electronic components, bicycles, vehicle types, furniture and processed agricultural products, the share increased from nine percent to 62.11 % during the same period, according to the Council for the Development of Cambodia (CDC). The Kingdom has made significant progress in transforming its economic structure by diversifying exports and reducing dependence on the garments sector, an important step towards achieving the country's long-term development vision of becoming a high-income country, Deputy Prime Minister and CDC First Vice Chairman Sun Chanthol said recently. "Such structural changes are crucial for the government to transform Cambodia into a high-income country by 2050, as we cannot rely on the garments, footwear and travel goods sector alone to achieve this vision," Chanthol said at the closing ceremony of the Ministry of Commerce's annual meeting earlier this month. To achieve this goal, the government has introduced multiple policies encouraging investments in priority sectors, including automotive and electronics, agriculture and agro-industry, health and pharmaceuticals, renewable energy, tourism, transport and logistics infrastructure.

CAMBODIA: Cambodia's exports to South Korea surge 23.5% to reach \$34.6M in Jan

Cambodia's exports to South Korea recorded a strong start to the year, rising 23.5 % year-on-year to reach \$34.6 million in January, according to trade data, released by the General Department of Customs and Excise (GDCE) recently. The increase contributed to total bilateral trade between Cambodia and South Korea climbing to \$83.7 million for the month. Imports from South Korea also grew steadily, reaching \$49 million in January, up 13.8 % compared to the same period last year. While Cambodia continues to run a trade deficit with South Korea, the faster pace of export growth signals strengthening demand for Cambodian-made goods in the Korean market. Officials attributed the uptick to deepening economic ties under the Cambodia-Korea Free Trade Agreement (CKFTA), which entered into force in late 2022. The agreement has gradually reduced tariffs on a wide range of goods, facilitating greater market access for Cambodian agricultural and manufactured products. Garments, footwear, travel goods, and agricultural commodities such as mangoes and processed food products remain among Cambodia's key exports to South Korea. Industry analysts say diversification efforts in recent years — particularly in agro-processing and light manufacturing — have helped Cambodian exporters tap into niche segments of the Korean consumer market. On the import side, Cambodia continues to rely on South Korea for machinery, electronics, vehicles, construction materials, and industrial inputs. The 13.8 % rise in imports reflects sustained domestic investment activity and infrastructure development projects, as well as growing consumer demand for Korean products. Economic observers note that South Korea remains one of Cambodia's important strategic trade and investment partners. Beyond merchandise trade, Korean companies have maintained a visible presence in Cambodia's banking, real estate, construction, and manufacturing sectors. South Korean investment has also supported vocational training initiatives and technology transfer programmed aimed at boosting local capacity. The January figures come amid broader efforts by Cambodia to diversify its export markets beyond traditional partners in North America and Europe. Strengthening ties with Asian economies is seen as a key pillar of Phnom Penh's long-term trade strategy, particularly under regional frameworks such as the Regional Comprehensive Economic Partnership (RCEP), which includes both Cambodia and South Korea. Currently, there are about 200 South Korean investors in Cambodia. "This clearly shows the good relations existing between Cambodia and South Korea," newly-appointed ambassador of South Korea to Cambodia Kim Chang Yong said recently. Official figures from the Ministry of Commerce showed that the bilateral trade between Cambodia and South Korea rose by nearly 10 percent to \$923 million last year, in which Cambodia exported \$326 million worth of goods to the East Asian nation. Analysts caution, however, that global economic uncertainties — including fluctuating commodity prices and softer external demand in some markets — could pose challenges in the months ahead. Still, the strong January performance suggests resilience in bilateral trade flows. Government officials have previously emphasized the importance of leveraging free trade agreements to boost small and medium-sized enterprise (SME) participation in export activities. Efforts are underway to improve product standards, logistics efficiency, and digital trade facilitation to ensure Cambodian businesses can better meet the requirements of developed markets like South Korea. If the current trajectory continues, trade between Cambodia and South Korea is expected to expand further in 2026, support by policy coordination, private-sector engagement, and deepening supply chain integration. The latest data underscores growing economic interdependence between the 2 Asian partners and highlights the potential for sustained growth in bilateral commerce.

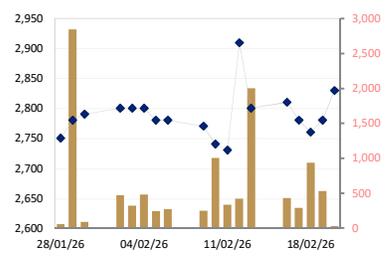

CAMBODIA: Cashew sector seeks skills upgrade with ADB support

Cambodia's fast-growing cashew industry is seeking to strengthen its workforce and processing capacity, as the Asian Development Bank (ADB) explores potential support for vocational training programmed aimed at upgrading skills across the value chain. The initiative was discussed during a meeting on Tuesday between the Cashew Nut Association of Cambodia (CAC), the Polytechnique Institute of Kampong Thom (PIKT) and ADB representatives in Kampong Thom province. The meeting was coordinated by the Ministry of Labor and Vocational Training. According to CAC, the discussion formed part of a pre-fact-finding mission by ADB to better understand the association's efforts to support cashew farmers and processors, as well as the broader challenges facing the sector as Cambodia seeks to expand domestic processing and improve export readiness. ADB representatives said the mission focused on assessing training needs in cashew processing, farm management and technical skills, particularly in light of labor shortages and rising operational costs in the industry. Speaking during the meeting, CAC President Silot said the association has made significant progress at the farm level through targeted training programmed designed to improve productivity and climate resilience. He said CAC has so far conducted 40 planned training sessions across 10 provinces, benefiting more than 8,400 cashew farmers. The training emphasized practical, on-farm learning rather than direct financial support. "Our approach has been to equip farmers with knowledge and techniques they can apply immediately, helping them reduce costs and increase yields," Silot said. He added that CAC has undertaken extensive field research and introduced low-cost, homemade foliar solutions, including Highly Effective Microorganisms (HEM) and Indigenous Microorganism *Bacillus subtilis* (IMOBs). These innovations, he said, have helped raise cashew yields by more than 10 percent over the past four years, while also lowering production expenses. While productivity at the farm level has improved, challenges persist in the processing segment of the industry. CAC Vice President Suy Kokthean highlighted labor shortages as a major factor contributing to high production costs for local processors. He noted that when machinery breaks down, many processors are forced to hire foreign technicians due to a lack of local expertise, resulting in costly delays and increased expenses. Weak management capacity among some processors was also identified as a key constraint. "There is a strong need for skills development, not only in machinery operation and maintenance but also in business planning and financial management," Kokthean said. During the meeting, ADB introduced the Skill Development Fund (SDF) to CAC and PIKT as a potential source of financing to support vocational and technical training initiatives. ADB encouraged the two institutions to jointly develop tailored training curricula to produce skilled workers for Cambodia's planned Cashew Industrial Park (CIP). the industrial park and attracting foreign investment. "Once the Cashew Industrial Park officially launches, we need to have sufficient human resources to meet the requirements of foreign companies without delay," he said.

Cambodia is currently one of the world’s largest producers of raw cashew nuts, but industry stakeholders have increasingly stressed the importance of expanding domestic processing to capture greater value, reduce reliance on raw exports and create higher-quality jobs. Development partners and industry leaders see skills development as a key pillar in transforming the cashew sector into a more competitive and sustainable contributor to Cambodia’s rural economy and export growth. Cambodia earned over \$1.5 billion from raw cashew nut exports in 2025, having shipped more than one million tons to international markets, according to unofficial figures from the CAC.

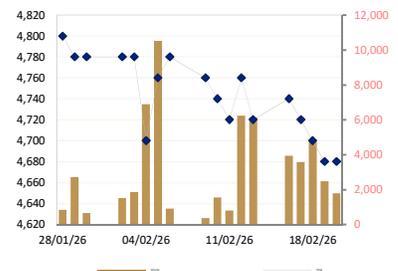

CAMBODIA: Labor Ministry Assures Workers of Ample Job Opportunities at Home

The Ministry of Labor and Vocational Training (MLVT) has reassured Cambodian workers in Thailand that ample job opportunities, stronger benefits and comprehensive support mechanisms are available at home amid uncertainty over Thailand’s new government policies. Speaking on February 18, ministry spokesperson Sun Mesa said Cambodia has not received any official notification from Thai authorities regarding the status of Cambodian migrant workers, leading to concerns among some workers about job security. “We are closely monitoring this uncertainty,” he said. “I would like to affirm that Cambodia has tens of thousands of job vacancies offering reasonable income for those who wish to work domestically. Our National Social Security Fund provides broader and more diverse benefits, including voluntary contribution schemes to support families. Even those without skills can enrol in training courses and receive allowances from the first day of study, so there is no cause for concern.” He highlighted key support measures for returning workers, including pre-employment training programmed with free accommodation and stipends, job forums in 14 key provinces in early 2026, and employment matching through the 1297 hotline. Mesa noted that workers employed in Cambodia can earn wages comparable to those in Thailand, while also receiving healthcare services, employment injury insurance and pensions through the National Social Security Fund. He added that undocumented workers in Thailand do not enjoy the same level of protection. As of January 2026, more than 960,000 Cambodians have returned home following border tensions between Cambodia and Thailand. Of these, about 630,000 were former migrant workers, with more than 310,000 securing jobs through ministry mechanisms, including the 1297 hotline, job fairs and direct factory recruitment. The ministry plans to expand training with guaranteed employment and organize over 60 additional job and social security forums nationwide this year, particularly in provinces with high numbers of returnees.
